## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments filed July 3, 2003 have been fully considered but they are not persuasive.

Regarding applicant's argument on page 8 lines 5-7, pertaining to the mode-locking of the laser system, where applicant describes not using a nonlinear loop mirror for mode-locking, however the explanation for obtaining a short mode-locked pulse type on page 7 lines 1-10, discloses that "the laser output is short mode-locked pulse type" is a result of the recited structure in claim 1. Therefore, Jeon et al disclosing similar structural arrangement with similar elements will also provide a mode-locked short pulse as result of the structural arrangement.

Regarding applicant's on page 8 lines 7-18, pertaining to claims 1 and 15 where applicant discloses that the Jeon et al cited reference does not teach a "continuous" wavelength (sweep) operation of the filter (111). Applicant's attention is directed to column 3 lines 25-30, where the filter (111) is described as providing a continuously varying the wavelength.

Regarding the objection to drawing based on claims 7,8,13,14,19 and 22 is withdrawn based on applicant's amendment.

Regarding the 35 USC 112 rejection of claims 1-14,16 and 22 is withdrawn based on applicant's arguments and amendment.

### ***Claim Rejections - 35 USC § 102***

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application

Art Unit: 2828

by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1,2,4-6,9-12,15-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Jeon et al (PN 5,812,567).

Figure 3 illustrates a wavelength tunable mode-locking optical fiber laser having a pump source (51), a wavelength division coupler (WDM) (12), an erbium doped gain medium (42) column 2 line 63, a dispersion shifted fiber (41) which allows for nonlinear effect column 3 line 1, polarization controllers (21) and (22), an acousto-optic tunable filter (111) for changing the wavelength, abstract, and a Faraday rotator for controlling the direction of polarization of the beam, abstract. Where the system as illustrated with an amplifying loop (101) and linear mirror (103) combined provide mode-locking of short pulses, column 4 line 40 and the abstract.

**Claim Rejections - 35 USC § 103**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Jeon et al (PN 5,812,567) in view of Delfyett, Jr. (PN 5,469,454).

Jeon et al fails to disclose using a semiconductor amplifier as the gain medium to obtain mode-locked pulses.

However, it is well known in the laser art to use semiconductor amplifiers to obtain mode-locked pulses as disclosed Delfyett, Jr. in the abstract and illustrated in figure 2 with a semiconductor optical amplifier (210).

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
